PROFESSIONAL SUMMARY

Full Stack Software Engineer with 2.5+ years of experience building scalable enterprise platforms, workflow engines, and real-time collaborative systems using TypeScript, React, and Node.js. Skilled in designing RESTful APIs, graph-based processing, schema-driven architectures, and extensible plugin systems.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript
Frontend: React.js, Next.js, Svelte, React Flow, TanStack Start, Vite
Backend: Node.js, NestJS, Hono, ElysiaJS, REST API Design
Databases & Caching: PostgreSQL, Redis, Drizzle ORM, LRU Cache
Auth & Security: JWT, RBAC, BetterAuth
Tools & Infrastructure: Git, TurboRepo (Monorepo), Socket.IO, AI SDK, Agile/Scrum

EXPERIENCE

Software Engineer

Oct 2023 – Present

Torus Innovations

Tirunelveli, TN, India

- Core contributor to the **next-generation Torus Low Code Platform**, an event-driven application development platform used by **GSS Tech Group** to build and deploy **fintech and payment solutions across the UAE, Kenya, and 10+ countries**.
- Built the platform's **entire frontend**, enabling users to visually design applications across **multiple domain modules** (UI, Data, Process, API, Integration), each with its own sub-modules and **independently managed artifacts**.
- Integrated **React Flow** for process flow orchestration and event binding, and developed **35+ RESTful APIs** with NestJS for artifact management, workflow orchestration, validation, and cross-module integrations.
- Implemented **graph-processing algorithms** including circular dependency detection, cross-node validation, and nested mutation handling, **eliminating invalid execution states** across the workflow engine.
- Built **real-time multi-user collaboration** with Socket.IO, implementing **artifact-level locking that scales with concurrent users**, enabling conflict-free editing across all modules.
- Designed a **schema-driven plugin system** with JSON schema uploads, consumed by a **dynamic JSON editor** with custom input types — enabling **runtime extensibility without redeployment**.
- Developed the platform's **WYSIWYG layout editor** with drag-and-drop, snapping, alignment guides, and dynamic resizing, used to build **10+ production screens** for client banking applications.

PROJECTS

Veza.db | *React, TanStack Start, AI SDK, Hono, PostgreSQL, Drizzle, Turborepo*

- Designed a scalable **monorepo architecture** using TurboRepo with shared packages for auth, database access, and caching.
- Built a **database management UI** with ER diagram visualization, interactive schema editor, and table data browser with inline editing.
- Implemented **multi-user auth and RBAC** using BetterAuth and JWT for secure access control across workspaces.
- Integrated an **AI-powered query assistant** that interprets relational schemas and generates context-aware SQL queries.

EDUCATION

Francis Xavier's Engineering College

Tirunelveli, TN, India

Master of Computer Applications

Oct 2021 – June 2023

St. John's College

Tirunelveli, TN, India

Bachelor of Computer Applications

June 2018 – April 2021
